# WATER AND WASTEWATER TREATMENT EQUIPMENT

Engineered  
for  
Performance

**J.L. WINGERT CO.**

## A Commitment to Quality

J.L. Wingert Company has grown to a position of industry leadership through three decades of uncompromising commitment to quality, reliability and value. This California based company is recognized as a prime supplier of advanced-design equipment to the water and wastewater treatment industries. Offering a full selection of mixers, separators, separator systems, bypass feeders, filter feeders, bromine feeders, coupon racks, glycol feed systems, sample coolers and sludge traps, tanks and tank stands, tank package systems, equipment control stations, specialty welding and custom systems, the J.L. Wingert Company is a preferred source for quality products that offer superior performance and reliability.

## MIXERS

Whether the application calls for a high, low or variable speed air or electric mixer, there is a smooth functioning, powerful Wingert model available for the job. Offered with a variety of mountings and motor sizes and types, these proven mixers are designed to handle a full range of mixing assignments. With features ranging from variable speed operation to explosion proof designs, Wingert mixers lead the industry in performance and reliability.

## SEPARATORS AND SEPARATOR SYSTEMS

Known for reliable and maintenance-free operation, Wingert Centrifugal Separators are the economical solution for the removal of solids such as sand, dirt, metal chips, and sludge. Ideal for wells, water recycling and other process water applications, these separators protect valuable equipment by removing damaging solids from liquids. Their maintenance-free design features no moving parts or filter media. Wingert Separators also can be used as pre-filters to reduce the cost and maintenance of more expensive filtration equipment. Wingert Separators and Separator Systems are available with flow rates from 8-13,900 GPM.

# BYPASS, BROMINE AND FILTER FEEDERS

Wingert Bypass Feeders and Filter Feeders are designed for the safe and reliable introduction of treatment chemicals into closed-loop circulating systems. They are ideal for hot and chilled water applications or other liquid systems compatible with the materials of construction. Standard products include flat bottom, dome bottom, high pressure and high capacity models. A complete selection of optional features and accessories is available.

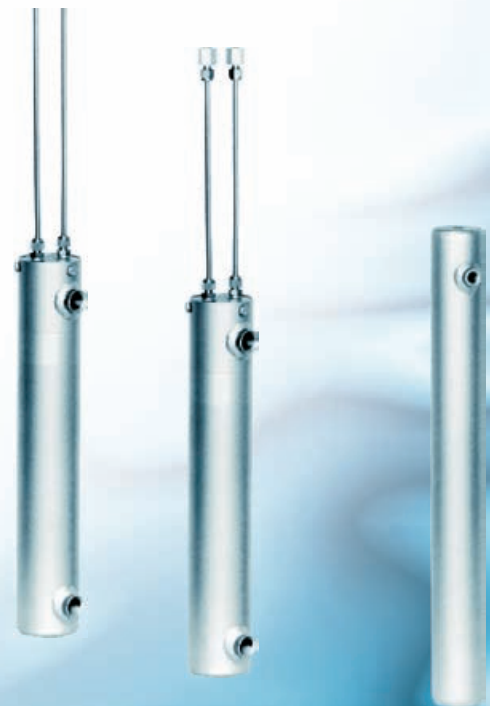

## CORROSION COUPON RACKS

Designed to closely monitor most water systems' corrosion rate, Wingert Corrosion Coupon Racks are available with one to six coupon holders mounted on a PVC backboard. A quick disconnect o-ring sealed holder with safety chain, inlet and outlet isolation valves, and PVC or CPVC construction are standard features. Wingert Corrosion Coupon racks are the popular choice for effective, inexpensive corrosion rate monitoring for most systems.

## SAMPLE COOLERS AND SLUDGE TRAPS

Utilizing a unique counterflow design coupled with 20 feet of seamless coil, Wingert Sample Coolers provide an efficient and safe method for cooling high temperature fluids for testing. Wingert Sample Coolers are designed to handle sample liquids up to 600° F at 1,500 psi. Wingert Sludge Traps, designed as a companion to the Sample Coolers, efficiently remove sediment and debris from the process fluid. The convenient drain port feature allows for the removal of unwanted material without shutting down the sample line.

# TANKS AND TANK STANDS

With standard polyethylene and polypropylene tank sizes ranging from 2 to 6,500 gallons, Wingert is a leading supplier of quality tanks and tank stands. Manufactured in cylindrical, rectangular and cone-bottom shapes, these tanks and stands meet a wide variety of industrial applications. Their flexibility can be further extended through the addition of optional equipment.

## TANK PACKAGE SYSTEMS GLYCOL FEED SYSTEMS

Wingert offers a broad selection of tank package systems for a wide range of industrial applications. Most packages include a tank and tank stand, chemical feed pump, mixer, and any of a long list of equipment options. Typical of these products is the Wingert Glycol Feed System. Available in three standard models, each system delivers a full package of performance features.

## CUSTOM SYSTEMS

Wingert custom systems are at work across the nation in applications ranging from modern chemical processing plants to sophisticated manufacturing facilities. With more than 30 years experience in custom system fabrication, Wingert has the expertise to meet the critical needs of today's demanding marketplace.
